The reply must be filed within one of the following time periods:</p> <p>a) <input type="checkbox"/> The period for reply expires ____ months from the mailing date of the final rejection.</p> <p>b) <input checked="" type="checkbox"/> The period for reply expires on: (1) the mailing date of this Advisory Action, or (2) the date set forth in the final rejection, whichever is later. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of the final rejection.</p> <p>Examiner Note: If box 1 is checked, check either box (a) or (b). ONLY CHECK BOX (b) WHEN THE FIRST REPLY WAS FILED WITHIN TWO MONTHS OF THE FINAL REJECTION. See MPEP 706.07(f).</p>		
<p>Extensions of time may be obtained under 37 CFR 1.136(a). The date on which the petition under 37 CFR 1.136(a) and the appropriate extension fee have been filed is the date for purposes of determining the period of extension and the corresponding amount of the fee. The appropriate extension fee under 37 CFR 1.17(a) is calculated from: (1) the expiration date of the shortened statutory period for reply originally set in the final Office action; or (2) as set forth in (b) above, if checked. Any reply received by the Office later than three months after the mailing date of the final rejection, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).</p>

Continuation of 3. NOTE: The cancellation of the other members of the Markush group in claim 9 requires further search and/or consideration for the limitation of "said staple fibers are glass fibers".

Continuation of 11. does NOT place the application in condition for allowance because: Applicant argues that Nagata et al. does not expressly describe crystalline/semi-crystalline high melt bi-component fibers. Applicant argues that the Examiner's assertion that the bicomponent coPET/PET fibers of Nagata et al. are crystalline/semi-crystalline fibers is pure speculation and not supported by any evidence. Nagata et al. teach that the second fibers or Applicant's "high melt bicomponent fibers" (along with the first and third fibers) are preferably polyester-based fibers because of their high melting point of the crystals (column 3, lines 10 - 20). It should be noted that the second fibers are considered to be at least semi-crystalline as Nagata et al. mentions the high melting point of the crystals in the PET meaning that the fibers have some level of crystallinity. Applicant indicates that each and every example provided in Nagata et al. uses amorphous (that is, non-crystalline or semi-crystalline) fibers. Applicant appears to be equating amorphous to semi-crystalline in their arguments. According to page 3, 6 and 11 of Applicant's Specification, Applicant discusses bicomponent fibers referred to as crystalline or semi-crystalline which have a melt flow temperature of generally about 150 to 180 degrees C and bi-component fibers referred to as crystalline/semi-crystalline which have a melt temperature of generally about 150 to 180 degrees C. Therefore, the Examiner interprets crystalline/semicrystalline to mean crystalline or semi-crystalline. The Examiner submits that based on Nagata's comments regarding crystals of PET, the fibers would be at least semi-crystalline as required by the claim. It should be noted that the claims do not require a particular level of semi-crystallinity, only that they are crystalline or semi-crystalline which the Examiner submits is met by the prior art. Furthermore, it should be noted that one is not limited to the examples of the disclosure when formulating a rejection. Disclosed examples and preferred embodiments do not constitute a teaching away from a broader disclosure or nonpreferred embodiments. In re Susi, 440 F.2d 442, 169 USPQ 423 (CCPA 1971). The Examiner submits that the anticipation and obviousness rejection over Nagata et al. and thus is maintained.
